Hour markers okay \_\_\_\_\_

Time correct \_\_\_\_\_

10. Please place an X in the triangle.

Which of the above figures is largest?

11. I am going to tell you a story. Please listen carefully because afterwards, I'm going to ask you some questions about it.

12.

Jill was a very successful stockbroker. She made a lot of money on the stock market. She then met Jack, a devastatingly handsome man. She married him and had three children. They lived in Chicago. She then stopped work and stayed at home to bring up her children. When they were teenagers, she went back to work. She and Jack lived happily ever after.

What was the female's name? \_\_\_\_\_

When did she go back to work? \_\_\_\_\_

What work did she do? \_\_\_\_\_

What state did she live in? \_\_\_\_\_

### Important Information:

If you decide to continue and self administer this test, you should understand this is an assessment tool and that you are not receiving an official diagnosis of mild cognitive impairment, Alzheimer's, or any one of the eight types of dementia.

If you find the test results suspicious, please don't jump to any conclusions. Instead, you should contact your doctor immediately, and ask for a neurological or geriatric consult. These specialist can determine, through a series of tests, whether or not you are suffering from or headed for Alzheimer's

While most causes of dementia are irreversible, there are many possible causes of dementia. Some causes are reversible, such as certain thyroid conditions or vitamin deficiencies. If these underlying problems are identified and treated, then the dementia reverses and the person can return to normal functioning.
